Test Client showing different operations

Service1 running in Chrome

Service1 Service

You have created a service.

To test this service, you will need to create a client and use it to call the service. You can do this using the svcutil.exe tool from the command line with the following syntax:

```
svcutil.exe http://localhost:55307/Service1.svc?wsdl
```

You can also access the service description as a single file:

```
http://localhost:55307/Service1.svc?singleWsdl
```

This will generate a configuration file and a code file that contains the client class. Add the two files to your client application and use the generated client class to call the Service. For example:

C#

```
class Test
{
    static void Main()
    {
        ServiceClient client = new ServiceClient();

        // Use the 'client' variable to call operations on the service.

        // Always close the client.
        client.Close();
    }
}
```

Visual Basic

```
Class Test
    Shared Sub Main()
        Dim client As ServiceClient = New ServiceClient()
        ' Use the 'client' variable to call operations on the service.

        ' Always close the client.
        client.Close()
    End Sub
End Class
```

Console App

```
CA\Users\bschu\OneDrive - Southeast Technical College\STC Spring 2026\CalculatorConsoleApp\CalculatorConsoleApp\bin\Debug\CalculatorConsoleA...
Choose equation type:
1. Addition
2. Subtraction
3. Multiplication
4. Division
Enter choice (1-4): _
```

```
Microsoft Visual Studio Debug Console
Choose equation type:
1. Addition
2. Subtraction
3. Multiplication
4. Division
Enter choice (1-4): 3
Enter first number: 15
Enter second number: 5
Result: 75
Press any key to exit...

C:\Users\bschu\OneDrive - Southeast Technical College\STC Spring 2026\CalculatorConsoleApp\CalculatorConsoleApp\bin\Debug\CalculatorConsoleApp.exe (process 55524) exited with code 0 (0x0).
To automatically close the console when debugging stops, enable Tools->Options->Debugging->Automatically close the console when debugging stops.
Press any key to close this window . . . _
```

I've shown the Multiplication here but have tested all functions. Also, not entirely sure what you wanted for the running SOAP WCF so hopefully the Test Client was it.
